

Atik Arena

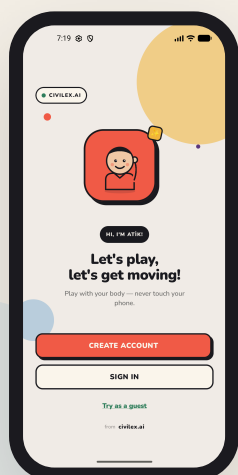

a Civilex.AI product

 Civilex.AI

No controller. You are the hero.

Ages 6–10 · a camera-controlled motion game arena

The child moves in front of the phone's camera; on-device AI reads them in real time and places them inside the game. No controller, no touchscreen, no extra hardware.

● No controller

A phone or tablet is all it takes.

● Footage never leaves the device

All processing happens inside the phone.

● Play or exercise?

The child plays; reflexes and coordination grow.

● Free to start

Live on Android, iOS in beta.

Open your camera and start playing
civilex.ai/indir

Scan the code

How it works

1

Prop up the phone

Place the phone or tablet two or three steps in front of the child.

2

Step in front of the camera

The app finds the body; calibration takes a few seconds.

3

Move and play

Jump, run, raise your arms. You are the hero of the game.

Games in the arena

Every game is built from levels rated 1 to 3 stars. The stars a child collects unlock the next game, so difficulty grows at their own pace. New games are added with each release.

Animal Rescue

Reach out, pop the balloons and free the animals inside.

Goalkeeper

Save the shots on your goal. Curled shots train reaction time.

Runner

Run in place, dodge the obstacles, collect the coins.

Get in Shape

Fit through the hole in the approaching wall. Solo or two-player.

Candy Pop

Pop the matching candies with your movements. Speed and focus.

Sauce Time

Catch the falling tomatoes, fill the crate. A 3D scene against the clock.

Camera footage never leaves the phone

All vision processing runs on the device. Nothing is recorded, nothing is sent to a server, nothing is uploaded to the cloud. A privacy-first architecture built for children's data — safe for parents and schools alike.

For parents and teachers

- No extra hardware — a single classroom tablet is enough.
- Two children can play together in front of the same camera (co-op).
- An alternative to sitting still in front of a screen.
