

Atik Arena

No controller.
You are the hero.

Atik Arena — a Civilex.AI product

Children sit still in front of the screen

Mobile games glue the child to the sofa. Motion consoles demand expensive hardware, a dedicated room and a controller. Nothing in between runs on the phone that is already in the house.

The phone's camera becomes the controller

Atik Arena is a camera-controlled motion game arena for children aged 6–10. The child moves in front of the camera; on-device AI reads their body in real time and places them inside the game.

Three steps and the game begins

1

Prop up the phone

Place the phone or tablet two or three steps in front of the child.

2

Step in front of the camera

The app finds the body; calibration takes a few seconds.

3

Move and play

Jump, run, raise your arms. You are the hero of the game.

Camera footage never leaves the device

All vision processing runs inside the phone; nothing is recorded, nothing is sent to a server. Children's data is the most sensitive class there is — on-device processing removes both the compliance burden and the per-user server cost.

Games in the arena

Animal Rescue

Reach out, pop the balloons and free the animals inside.

Goalkeeper

Save the shots on your goal. Curled shots train reaction time.

Runner

Run in place, dodge the obstacles, collect the coins.

Get in Shape

Fit through the hole in the approaching wall. Solo or two-player.

Candy Pop

Pop the matching candies with your movements. Speed and focus.

Sauce Time

Catch the falling tomatoes, fill the crate. A 3D scene against the clock.

Progress unlocked with stars

Every game is built from levels rated 1 to 3 stars. The stars a child collects unlock the next game, so difficulty grows at their own pace and there is always a reason to come back.

Three people, one product

The child

Playable from the first second — no controls to learn.

The parent

Replaces sitting still in front of a screen.

The teacher

One classroom tablet is enough; no extra hardware.

Where we are today

Android

Live on Google Play.

iOS

In TestFlight beta.

Incubation

ETKİM pre-incubation (Ministry of Education YEĞİTEK + METU Technopolis).

Why it travels well

No hardware

An ordinary phone or tablet is enough;
zero cost to adopt.

Visual gameplay

The game is taught by movement;
localisation is text only.

On-device AI

No per-user cloud inference cost.

Atik Arena

Open your camera. Be the hero.
